

SAAS Fuel Pressure Regulators are a 1 : 1 rising rate system Regulator . They are designed to fit all turbo and naturally aspirated EFI engines. The SAAS adjustable fuel pressure regulator is designed to deliver more fuel pressure and flow under any high or low boost pressure.

GENERAL FUEL SETUP SYSTEM EXAMPLE

IMPORTANT NOTE:

- We recommended that installation be carried out by a qualified mechanical technician.
- If you're installing the Fuel Pressure Regulator without the assistance of a qualified technician please ensure the following steps:
 1. We recommended that you use high quality EFI pressure hose and the correct clamps.
 2. We recommend that a thread sealer is used to seal fittings.
 3. Please make sure that all working areas are well ventilated.
 4. Due to working with pressure, SAAS recommends that eye-wear and safety apparel is used to protect you from accidental fuel spray.
- SAAS does not take any responsibility if anything should happen to your engine due to incorrect fitment or incorrect adjustment.
